EXPERIRMENT 7

Cellular System Performance Dashboard

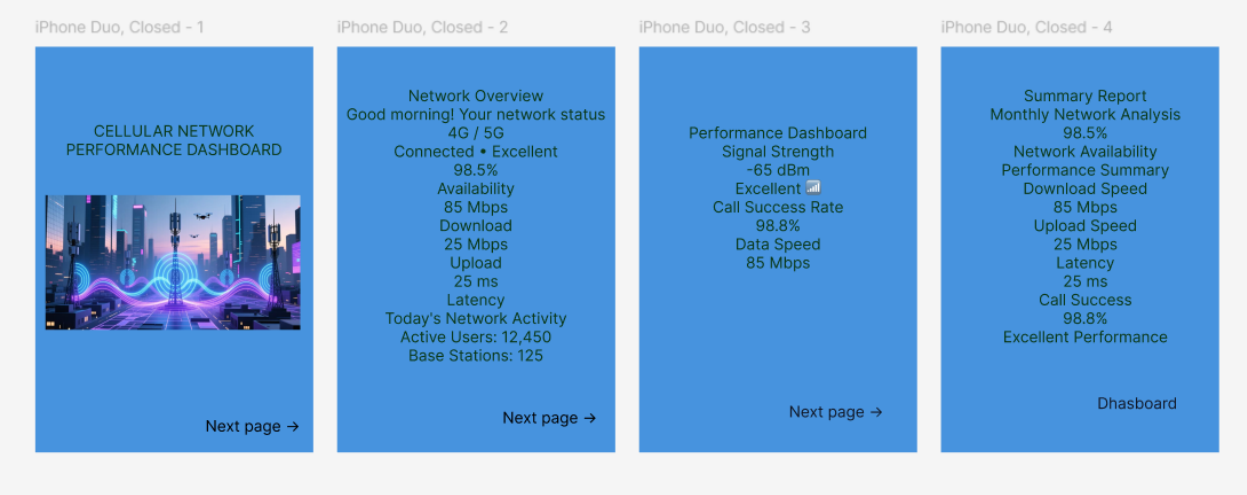

AIM:

To develop a dashboard prototype in Figma displaying important performance criteria of a cellular system, such as signal strength, network coverage, data speed, call quality, and network availability.

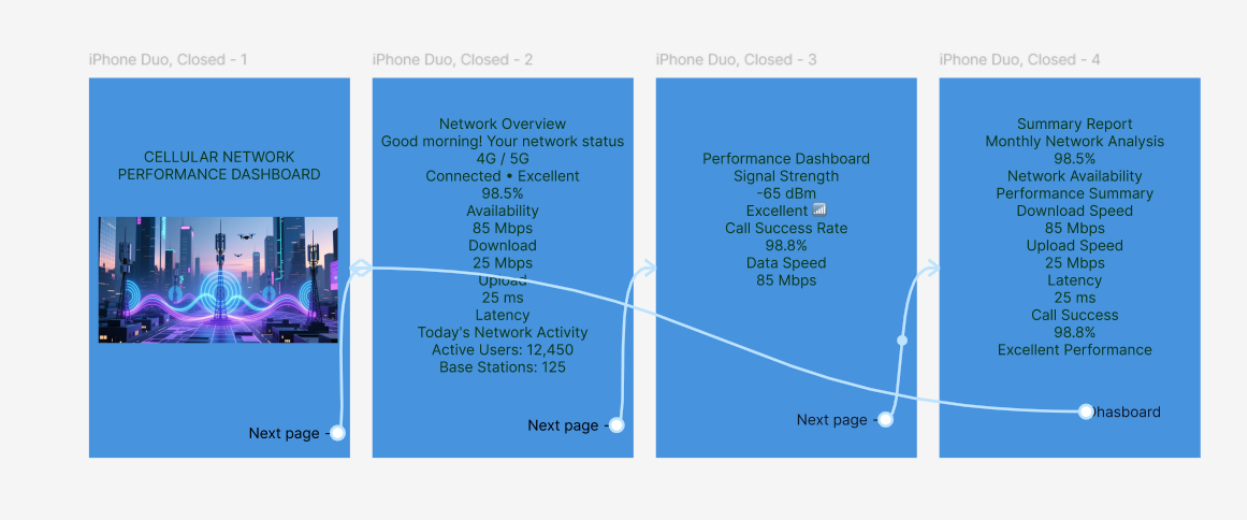

PROCEDURE:

1. Open Figma and create a new design file.
2. Design a dashboard layout with a suitable title, such as "Cellular Network Performance Dashboard".
3. Add cards to display network performance metrics such as signal strength, download speed, upload speed, and latency.
4. Include graphical representations such as bar charts, line charts, and progress indicators.
5. Add network availability and call success rate indicators.
6. Use suitable colours, icons, and labels to improve the dashboard appearance.
7. Arrange all performance indicators neatly on the dashboard.
8. Use the prototype option to connect screens and demonstrate dashboard navigation.

DESIGN:

PROTOTYPE:

RESULT:

Thus, a cellular system performance dashboard prototype was successfully developed using Figma, displaying important network performance criteria through graphical representations and indicators.
