EXPERIMENT 2

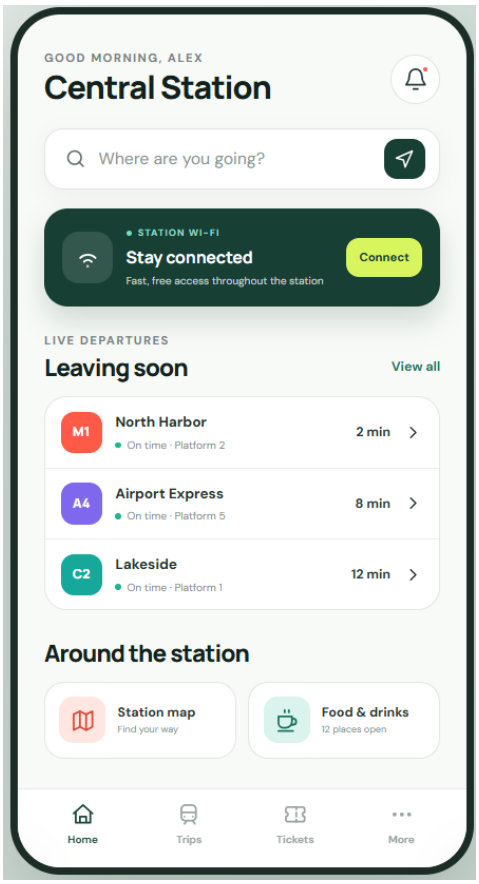

AIM

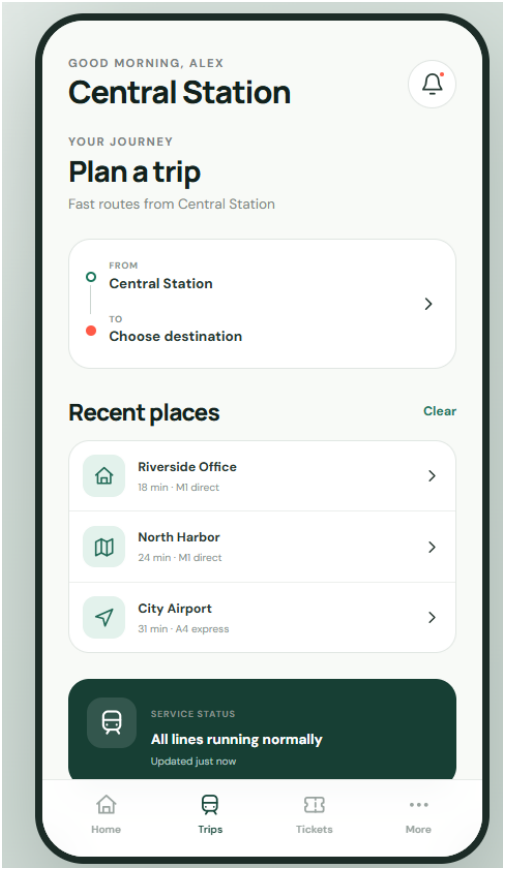

To design a user interface prototype for a mobile station application using Figma, focusing on connectivity and convenience for passengers.

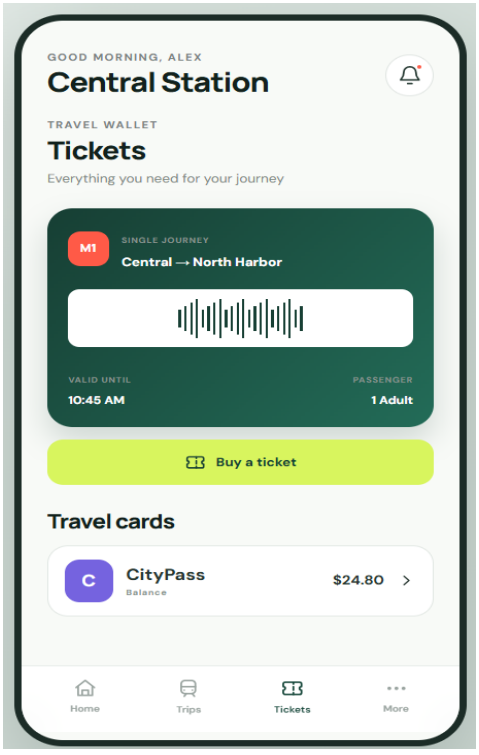

PROCEDURE

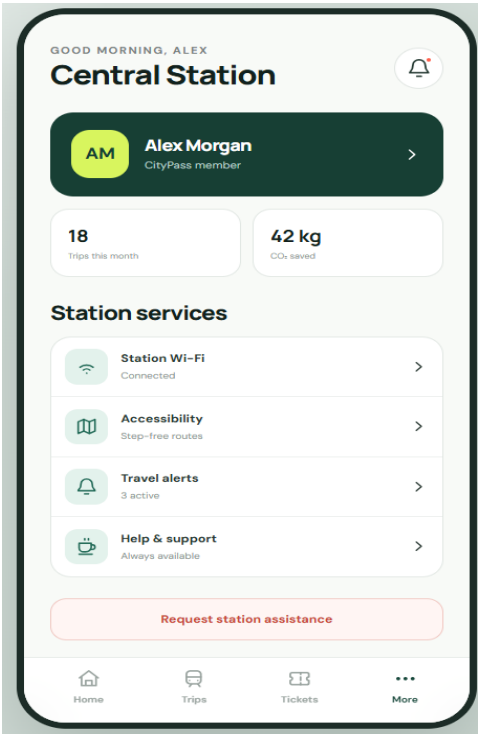

1. Open Figma and create a new design file.
2. Create mobile screen frames for Home, Trips, Tickets, and More.
3. Design the Home screen with a search bar, live train departures, station Wi-Fi connectivity, and station services.
4. Design the Trips screen to help users select destinations and view recent places.
5. Design the Tickets screen to display ticket details, travel passes, and a ticket booking option.
6. Design the More screen to provide station services, accessibility information, travel alerts, and help options.
7. Use consistent colours, icons, typography, and buttons to make the interface attractive and user-friendly.
8. Create interactive prototypes by connecting buttons and navigation tabs to their respective screens using Figma's Prototype feature.
9. Preview the prototype and test the navigation flow to ensure that all buttons work correctly.

RESULT

A mobile station user interface prototype was designed using Figma, providing convenient access to live departures, trip planning, ticket management, station Wi-Fi, and essential station services through an interactive and user-friendly interface.
