EXPERIMENT 4

AIM

To create a visual representation in Figma highlighting the seven layers of the mobile network protocol stack and their functions using diagrams, icons, and suitable colours.

PROCEDURE

1. Open Figma and create a new design file.
2. Create a frame and add the title “Mobile Network Protocol Stack.”
3. Design seven rectangular layers: Physical, Data Link, Network, Transport, Session, Presentation, and Application.
4. Arrange the layers vertically in the correct order using different colours and clear labels.
5. Add suitable icons, brief definitions, and examples for each layer.
6. Use arrows to illustrate the flow of data between the layers.
7. Apply consistent typography, spacing, and alignment to improve readability.
8. Review the design and save the completed visual representation.

DESIGN

iPhone 18 Pro - 1

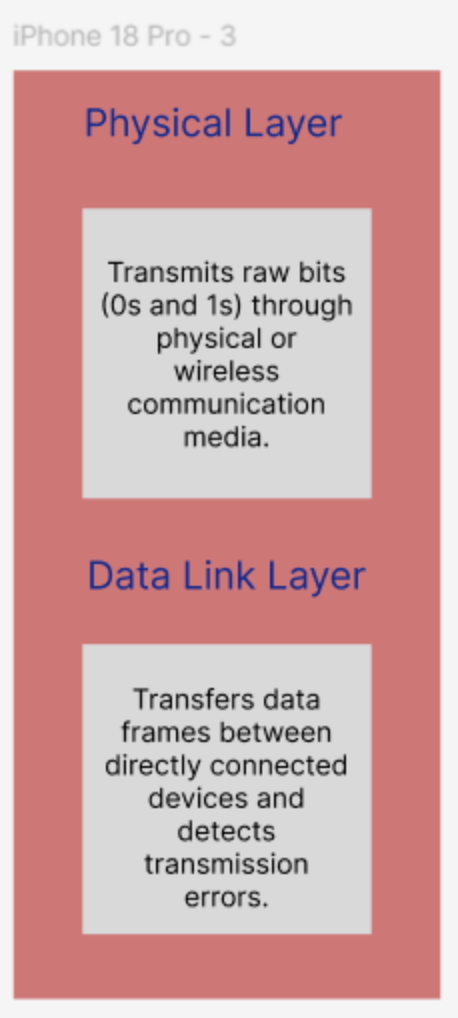

Mobile network protocols define the rules and procedures that enable mobile devices to communicate and exchange data over a network.

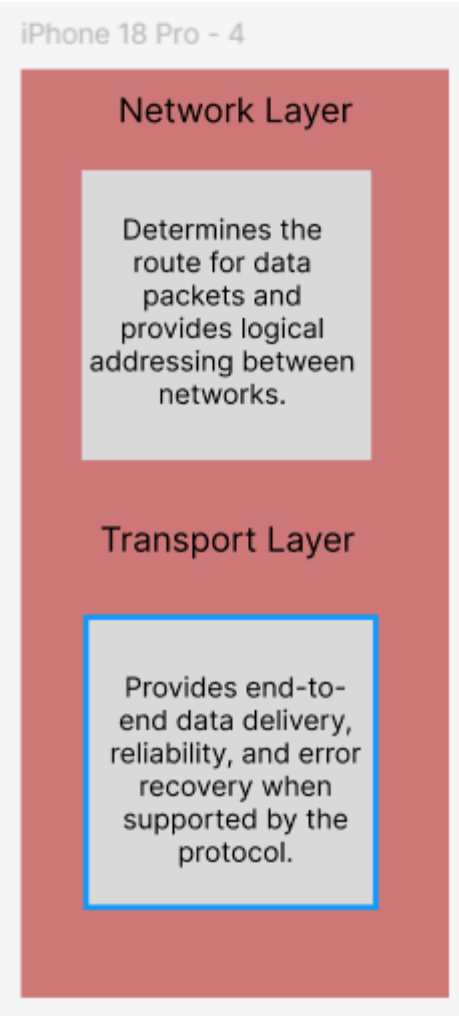

NEXT

iPhone 18 Pro - 2

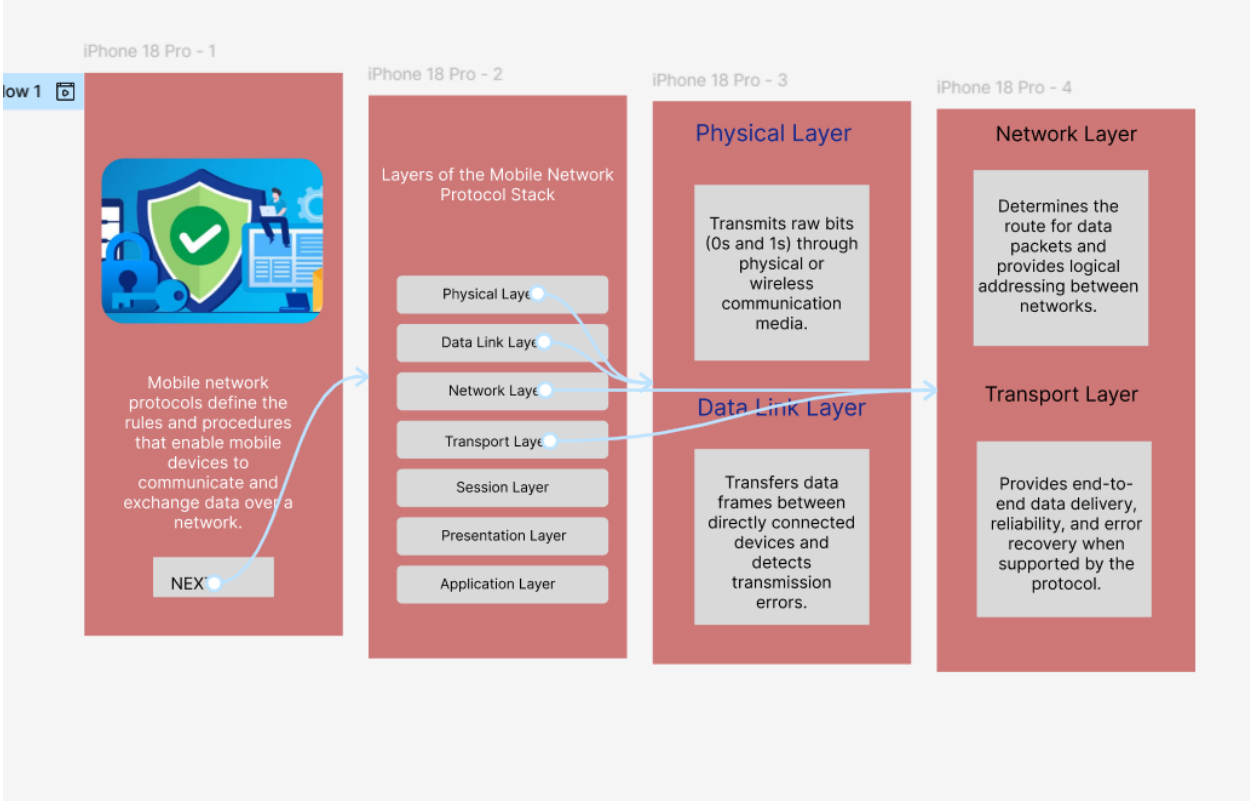

Layers of the Mobile Network Protocol Stack

- Physical Layer
- Data Link Layer
- Network Layer
- Transport Layer
- Session Layer
- Presentation Layer
- Application Layer

iPhone 18 Pro - 3
Physical Layer
Transmits raw bits (0s and 1s) through physical or wireless communication media.
Data Link Layer
Transfers data frames between directly connected devices and detects transmission errors.

iPhone 18 Pro - 4
Network Layer
Determines the route for data packets and provides logical addressing between networks.
Transport Layer
Provides end-to-end data delivery, reliability, and error recovery when supported by the protocol.

PROTOTYPE

RESULT

Successfully created a visual representation in Figma illustrating the seven layers of the mobile network protocol stack, their key functions, and the flow of data between layers.
